

**Pierce Laminated Products**  
**Custom Edge Styles**

# Self-Edge

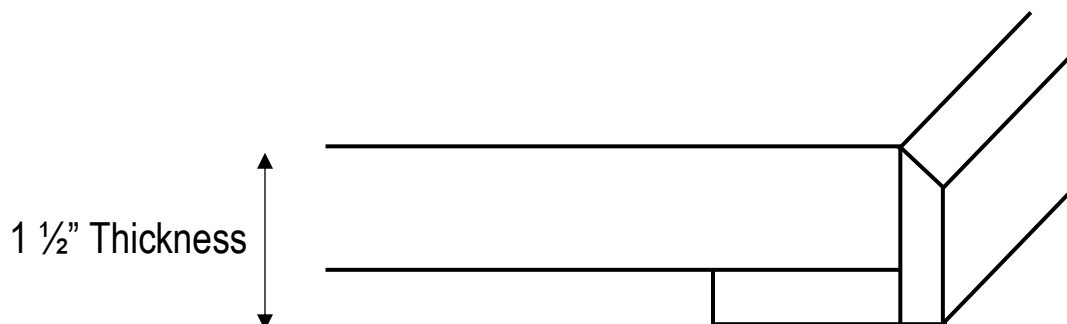

This timeless original with a 90° edge profile provides a clean and crisp look with the budget friendly consumer in mind.

---

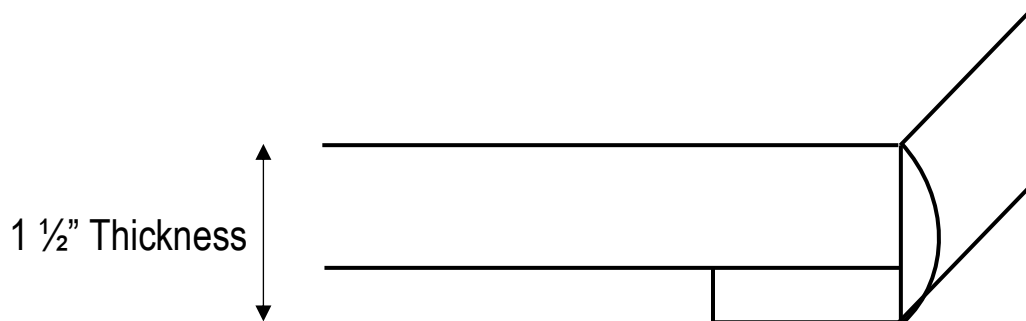

# Bevel-Edge

The Bevel Edge is a miter folded from one piece of laminate, therefore the pattern follows through from the face to the edge, giving a much more realistic look to simulate stone patterns and wood grains. This edge is the only one of our upgraded edge profiles available on the backsplash as well as the front.

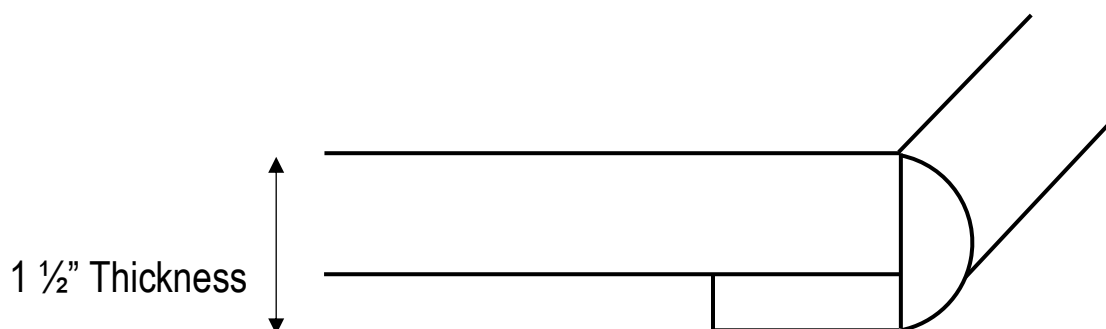

# Crescent-Edge

The Crescent Edge profile offers a soft curve that mimics the “bullnose” granite edge and blends into most any kitchen or bath design. The finished look gives the illusion of real granite countertops at a fraction of the cost.

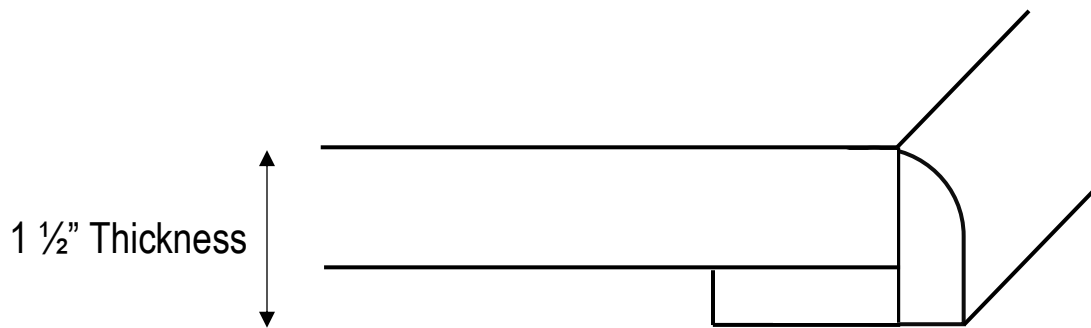

# Bullnose-Edge

The Bullnose Edge profile is similar to the above Crescent Edge but offers a more pronounced curve to the front once again providing the illusion of stone. **(Formica colors only.)**

# Cascade-Edge

The Cascade Edge profile adds interest and subtle dimension.

# Hart-Edge

The Hart Edge profile mimics the shape of an upside down heart. This beautiful edge profile offers a subtle curve that brings a classic look to any room and emulates the luxurious look of stone.
